Fragments of Francesco d'Appignano's *Improbatio*

William Duba

Abstract

A recent discovery of a manuscript fragment of Francesco d'Appignano's *Improbatio* provides the occasion to return to the text 30 years after Nazareno Mariani's *editio princeps*. The fragment provides an opportunity to understand more clearly the *Improbatio*, its diffusion in the fourteenth century, and Mariani's edition.

In 1993, Nazareno Mariani published Francesco d'Appignano's *Improbatio* and thereby began a new era in the study of this great fourteenth-century thinker¹. Combined with the institutional force of the Centro Studi f. Francesco d'Appignano, founded by Domenico Priori, and with the support of *Picenum Seraphicum*, Mariani's work set the tone for a renaissance in studies of the maverick thinker from Appignano and fostered a community of scholars.

The recent discovery of a fragment of the *Improbatio* provides an opportunity to advance our knowledge about the text, its diffusion in the fourteenth century, and Mariani's edition.

¹ Francesco d'Appignano, *Francisci de Esculo OFM Improbatio*, ed. Nazareno Mariani OFM, Grottaferrata 1993.

The Fragment

The codex Paris, Bibliothèque nationale de France, NAL 2317 was assembled in the early twentieth century from loose fragments at the library. As part of the research project *Retracing the Past* funded by the Stavros Niarchos Foundation, Dr. Laura Albiero studied a series of fragment volumes at the Bibliothèque nationale, including this one, and prepared them for publication on the *Fragmentarium* Digital Laboratory². She described the fragment that interests us here, NAL 2317, ff. 35-36, as a bifolium, 298 x 208 mm, with a single-column of text written in a fourteenth-century chancery hand. I subsequently identified the content as belonging to the *Improbatio* and containing text that corresponds to that found on pp. 430-449 (f. 35) and pp. 477-492 (f. 36) of Mariani's edition³.

The Original Manuscript

The fragment originally belonged to the same codex as that of a larger fragment discovered by Eva Luise Wittneben in the 1990s. In a groundbreaking study, Wittneben and Roberto Lambertini presented the manuscript Paris, BnF latin 4246, announcing the discovery of the fragment as well as material relating to Francesco d'Appignano's trial⁴. With respect to the *Improbatio*, they concluded⁵:

- The manuscript latin 4246 was part of the Bibliothèque Royale (and thus in its present state from before the French Revolution).
- On f. 1r appears the shelfmark 757 of the library of the French Minister Jean-Baptiste Colbert.

² The project summary is published on *Fragmentarium* <https://fragmentarium.ms/sub-projects/BnF_Albiero> (last consulted 20-09-2022).

³ The fragment has been published on *Fragmentarium* <<https://fragmentarium.ms/overview/F-v7po>> (last consulted 20-09-2022).

⁴ E. Wittneben, R. Lambertini, *Un teologo francescano alle strette*, «Picenum Seraphicum», n. s. 18 (1999), pp. 97-122.

⁵ *ibid.*, 97-112.

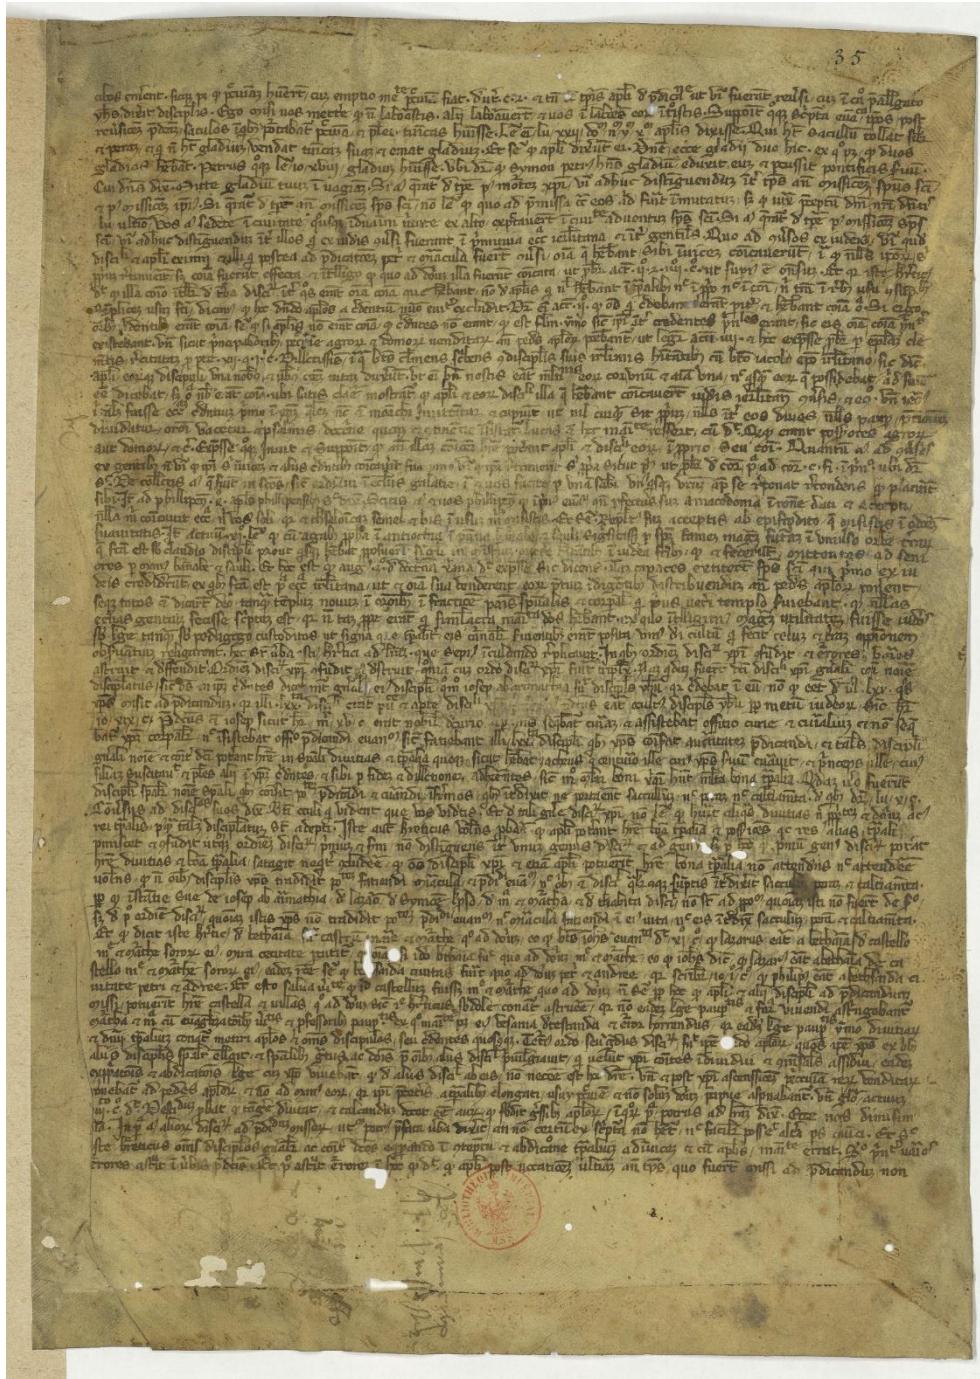

Fig. 1 Paris, Bibliothèque nationale de France, NAL 2317, f. 35r (Image: Gallica/Public Domain)

- Étienne Baluze, Colbert's librarian, used some of the texts bound in this codex in his *Miscellaneorum liber primus*, published in 1678⁶.
- In his table of contents, Baluze lists some of the documents currently in this codex as coming from at least three, if not four, codices of the library of Colbert⁷.

Wittneben and Lambertini further provided a list of the contents of the manuscripts, with a bibliography for each entry. For the fragment from the *Improbatio* (ff. 8-19 in the codex), the authors noted that it corresponds to pp. 212-392 of the Mariani edition, and that it picks up immediately after the fragment contained in Città del Vaticano, B.A.V., Vat. lat. 14812, ff. 37-48⁸.

A comparison of the color digitization of NAL 2317⁹ with a grayscale retro-digitization of a microfilm of 4246¹⁰ and a black-and-white reproduction of Vat. lat. 14812¹¹ confirms that all three fragments are written in the same hand and come from the same manuscript. As near as can be judged given the divergent image quality, the script is identical, written in a single column. While Latin 4246 and the Vatican manuscript usually have between 57 and 59 lines per page, they do occasionally have more, with 62 lines on latin 4246, f. 14v and 63 on Vat. lat. 14812, f. 45r. The NAL 2317 fragment, however, has 62, 63, 65, and 63 lines on ff.

⁶ S. Baluze, *Miscellaneorum liber primus*, Paris 1678.

⁷ *ibid.*, unpaginated table of contents, first page: «Acta inquisitionis à Iohanne XXII. institutae adversus Petrum de Paulude ordinis Praedicatorum, cum responsionibus ejusdem. pag. 165. —Ex veteri codice MS. bibliothecae Colbertinae.» Second page: «Articuli probationum contra fratrem Vbertinum de Casali inductarum à fratre Bonagratis. pag. 293. —Responsio fratris Vbertini de Casali ordinis Minorum circa quaestionem de paupertate Christi et Apostolorum, facta coram Iohanne XXII. apud Avignonem in consistorio. pag. 307. —Examen judiciale Francisci Veneti asseclae Massili de Padua. pag. 311. —Examen judiciale fratris Francisci de Esculo ordinis Minorum. pag. 315. —Ex tribus antiquis codicibus MSS. bibliothecae Colbertinae.» Wittneben, Lambertini *Un teologo*, point out that, while the *articuli* against Ubertino da Casale are in latin 4246, his *responsio* is not.

⁸ Wittneben, Lambertini, *Un teologo*, p. 100, n. 13.

35r-36v, thus in the upper range of what is seen in the other codices, but with between 57 and 63 lines per page.

Reconstruction

The Vatican fragment and the one discovered by Wittneben are consecutive sexterns. As Wittneben and Lambertini observed, Paris, latin 4246, f. 8r begins with *similiter truncat*, the words that immediately follow where Vat. lat. 14812 stops. To this can be added that the catchword at the bottom of Vat. lat. 14812, f. 48v is indeed *similiter truncat*. Put together, the two sexterns witness roughly three-quarters of the *Improbatio* text.

The NAL 2317 fragment introduced here comes from the last gathering of the manuscript. It witnesses the text contained in Mariani's edition from p. 437, l. 3, *cibos emerent* to p. 449, l. 28-9, *ultimam vocationem* (f. 35r-v) and from p. 477, l. 11, *omnino delectum* to p. 492, l. 9, *aliis discipulis*.

In his edition (=M), Mariani made use of the three manuscript witnesses known to him:

L= Firenze, Biblioteca Medicea Laurenziana, Plut. 31 sin. 3, ff. 1ra-63vb¹².

V¹= Città del Vaticano, Vat. lat. 4857, ff. 1r-82v¹³.

V²= Città del Vaticano, Vat. lat. 14812, ff. 36r-47v.

¹² Mariani, Introduction to *Improbatio*, 28-30. In fact, Mariani there lists the foliation as ff. 23r-85v, which corresponds to an older foliation scheme. In the edition, however, Mariani uses later foliation. A digitization of the manuscript is available at <<http://mss.bmlonline.it/s.aspx?Id=AWOMrDqpI1A4r7GxMYJD&c=Collectio%20questionum%20de%20paupertate%20Christi#/book>> (last consulted 20-09-2022). There is also the “Identifier” IT:FI0100_Plutei_31sin.03 associated with either the manuscript or the digitization.

¹³ Digitization available at <https://digi.vatlib.it/view/MSS_Vat.lat.4857> (last consulted 20-09-2022).

For the sake of simplicity, I will use V to refer to Vat. lat. 4857 and, for the last witness, use:

P = Vat. lat. 14812, f. 36r-47v + Paris, BnF latin 4246, ff. 8r-19v + Paris, BnF NAL 2317, f. 35r-36v.

The extent of the survival of P can be determined by comparing the length of its text and gaps against the other manuscripts, LV, and Mariani's edition.

Parallels between fragments of P, the foliation of L and V, and Mariani's pagination

Fragment Part	L (ff.)	V (ff.)	Mariani (pp.)
Vat.lat. 14812, 37r-48v	1ra-22vb	1r-28v	47-212
12 leaves	~87 columns	~55 sides	~166 pages
latin 4246, 8r-19v	22vb-46va	28v-60r	212-392
12 leaves	~95 columns	~63 sides	~181 pages
<i>Missing Text Before</i>	46va-52rb	60r-68r	392-436
	~20 columns	~16 sides	~45 pages
NAL 2317, f. 35r-v	52rb-54vb	68r-70v	436-449
1 leaf	~8 columns	~5 sides	~14 pages
<i>Missing Text Inside</i>	54vb-58rb	70v-75v	449-477
	~14 columns	~10 sides	~29 pages
NAL 2316, f. 36r-v	58rb-60va	75v-78v	477-492
1 leaf	~9 columns	~6 sides	~16 pages
<i>Missing Text After</i>	60va-63vb	78v-82v	492-512
	~13 columns	~8 sides	~21 pages

To every leaf of the fragmented codex corresponds, on average, 7.7 columns of L, 5.0 sides of V and 14.5 pages of M. Solving for the missing text before the NAL 2317 fragment, within it (between f. 35v and 36r) and after it, we get:

Gap in text	L (7.7 col. per leaf)	V (5.0 sides per leaf)	M (14.5 pp. per leaf)	Missing Leaves
Before	$20/7.7 = 2.6$	$16/5 = 3.2$	$45/14.5 = 3.1$	3
Within	$8/7.7 = 1.8$	$10/5 = 2.0$	$29/14.5 = 2.0$	2
After	$13/7.7 = 1.7$	$8/5 = 1.6$	$21/14.5 = 1.4$	<2

The text between the end of the fragment contained in latin 4246 and the beginning of the text in NAL 2317, f. 35r, would have been carried by three leaves of the manuscript; the gap between f. 35v and 36r corresponds to two leaves, and the length from the end of 36v to the end of the *Improbatio* text would be just under two leaves.

Therefore, the bifolium in NAL 2317 was the second-innermost, and had three bifolia outside of it. Reconstructing the original codex of P, after the two sexterns preserved in Vat. lat. 14812 and latin 4246, there followed a quatern, and the explicit to the *Improbatio* would have appeared on the verso of the second-to-last leaf.

Indications of Provenance

The three fragments all appear in fragment volumes, two from the twentieth century and one from the eighteenth. Vat. lat. 14812 was assembled in the summer of 1970 from fragments held at the Vatican¹⁴. As noted above, NAL 2317 was put together in the early twentieth century at the Bibliothèque Nationale in Paris from loose fragments kept there. Finally, as Wittneben and Lambertini also showed above, latin

¹⁴ J. Ruysschaert, *Les Décrétales du Ps.-Isidore du Vat. lat. 630. Péripéties vaticanes d'un manuscrit de Jean Jouffroy, consulté par Bernardino Carvajal*, «Miscellanea Bibliothecae Apostolicae Vaticanae» 1 (1987), pp. 111-115, at p. 115, states that the Prefect Giovanni Mercati gathered in a closet binding waste fragments; roughly eight years after Mercati's death, in 1965, the librarians began working with the material, and, over a 20-month period in 1970-1971, they assembled some 21 fragment volumes, including this one. Cf. A. Maier, *Eine unbeachtete Quaestio aus dem Visio-Streit unter Johann XXII.*, «Archivum Fratrum Historicum» 63 (1970), pp. 280-318, reprinted in eadem, *Ausgehendes Mittelalter. Gesammelte Aufsätze zur Geistesgeschichte des 14. Jahrhunderts*, v. III, Rome 1977, pp. 505-542, at p. 513, n. 22, «Der Vat. lat. 14812 ist ein Miszellanband, der im Sommer 1970 aus einer Reihe verschiedenartiger Fragmente, die bisher im Vatikanischen Archiv waren, zusammengebunden worden ist.» B. Bazán, *Siger de Brabant: écrits délogique, de morale, et de physique*, Louvain-Paris, 1974, p. 7, n. 1, refers to a letter from Ruysschaert according to which the first gathering (ff. 1-8), containing sophismata, was held in the Archivio Secreto Vaticano and bound in the codex at the suggestion of Auguste Pelzer. Since Fernand van Steenberghen cited the ff. 1-8 fragment in 1931 as being in the A.S.V., the contents of the fragment volume were not exclusively binding waste; in any case, the *Improbatio* fragment (ff. 36-47) shows no sign of reuse.

4246 was in the Bibliothèque Royale, it bears the shelfmark from Colbert's library, and Baluze in 1678 published some of its contents, but claiming that they came from at least three books.

The discovery of the NAL 2317 fragment suggests that Colbert may have had the whole book, or at least the last two quires. The leaves would have been rebound later, and some of the fragments further diminished. This would explain why Baluze referred to more than one book in citing the material. Nevertheless, we cannot exclude some kind of reuse; in comparison with the other two parts, the margins of NAL 2317 have been heavily trimmed.

It is not clear where Colbert acquired P or parts of it. Given that the other material bound in the volume relates to early fourteenth-century ecclesiastical investigations and controversies, Avignon seems an obvious choice. The 1369 catalogue of the Papal Library at Avignon lists a copy of an «*Improbatio Francisci de Marchia*» in the luxurious *Chambre du cerf-volant*¹⁵. That book, apparently bound with the *appellationes* of Louis of Bavaria and Michael of Cesena, was among those that, during the schism, moved with the antipope Benedict XIII to Peñiscola¹⁶. In 1429, Benedict's successor renounced his claims to the papacy. As part of the agreement, the papal documents were returned to Rome, but the books went to the envoy, the Cardinal Pierre de Foix, who in 1457 used them for the library of the Collège de Foix that he founded at the University of Toulouse. Over two centuries later, Colbert took possession of the remaining books, and in the eighteenth century, they entered the Bibliothèque Royale.¹⁷

Most likely, the catalogues refer to an *Improbatio* other than P. As Maier notes, the full title is *improbatio Francisci de Marchia cuiusdam dicti in sermone domini Johannis pape, scilicet <quod> Christus homo ut homo non regnabit*

¹⁵ M. Faucon, *La librairie des papes d'Avignon. Sa formation, sa composition, ses catalogues (1316-1420) d'après les registres de comptes et d'inventaires des archives vaticanes*, Paris 1887, v. 2, p. 31; subsequently it appeared in the study of the pope, M.-H. Jullien de Pommerol, J. Monfrin, *La Bibliothèque Pontificale à Avignon et à Peñiscola pendant le grand schisme d'occident et sa dispersion. Inventaires et concordances*, Rome 1991, p. 139, no. 39.

¹⁶ Pommerol, Monfrin, *La Bibliothèque Pontificale*, p. 316, no. 6; Faucon, *La librairie des papes d'Avignon*, v. 2, pp. 121-122, no. 701.

¹⁷ L. Delisle, *Le cabinet des manuscrits de la Bibliothèque Impériale*, t. I, Paris 1868, pp. 493-508.

post finale iudicium. The *Improbatio* that we are discussing is against *Quia vir reprobus*, from ca. 1330. Anneliese Maier observes that the catalogue refers to a claim that John XXII first made in a sermon on 5 January 1332, namely that the human nature of Christ does not reign after the Last Judgment; on 2 February, he added that Christ as divine person would continue to reign. On this basis, Maier hypothesizes that the *Improbatio* named in the Avignon catalogue is therefore a different *Improbatio* from the one that has been seen until now. Moreover, Latin 4246 has, over each of the works it contains, titles written in a seventeenth-century hand. In the pieces that Baluze publishes in his 1678 *Miscellaneorum liber primus*, the titles he gives to the works match those seventeenth-century titles; thus the leaves gathered in the codex likely existed in Colbert's library at that date. The transfer of the Foix library, on the other hand, did not happen until 1680.

In any case, Colbert, working through Baluze and his agents, was one of the most prolific library-builders of the seventeenth century, acquiring books and fragments using the full array of techniques available to a powerful minister in the royal administration of Louis XIV. When the book was fragmented, whether before or after Colbert's acquisition, remains a mystery; both cases are possible¹⁸. Perhaps, as more of the fragments conserved in the libraries of the world, especially Paris and the Vatican, come to light, this mystery can be resolved.

Witness to the Text

In their article announcing the discovery of the sexternion in Latin 4246, Wittneben and Lambertini announced that they intended to publish a study on how this discovery affects our knowledge of the textual tradition of the *Improbatio*¹⁹. While a full philological analysis will still have to wait, the NAL 2317 fragment provides an opportunity to

¹⁸ For a case study of involving Colbert and Baluze's collecting pieces of dismembered manuscripts, see P. Chambert-Protat, *A Seventeenth-Century Treasure Hunter in the Rubble of a Ninth-Century Library. Gathering Fragments and the History of Libraries*, «Fragmentology» 1 (2018), pp. 65-81.

¹⁹ Wittneben, Lambertini, *Un teologo*, p. 100, n. 13.

gain some insights into the relation between P and LV, especially since digital surrogates of all three witnesses are now available. Comparing a transcription of the text of P to Mariani's edition and the other two manuscript witnesses provided a few hints about the relation between the texts, as well as Mariani's editorial method. A table in the appendix lists and classifies all the non-orthographical accidents in the three manuscripts and editions.

For at least the span of 6,747 words covered by the NAL 2317 bifolium, the quality of all three witnesses is excellent. The collation revealed four major textual perturbations, all apparently the result of *omissiones per homeoteleuton*: one of 20 words in PV and three of 29, 31, and 23 words in V alone. It does not appear that V is directly descended from P, as on p. 438, l. 15 (=438.15) there appears to be a case where a single passage witnessed by L appears in two incompatible haplographies in P and V:

L: Ut probatur de Corinthiis, prima Ad Corinthios, capitulo finali, in principio

P: Ut probatur prima Ad Corinthios, capitulo finali, in principio

V: Ut probatur de Corinthiis, capitulo finali

The context makes it clear that the reference is not just to Paul's First Epistle to the Corinthians, but specifically concerning the Corinthians as discussed in Paul's First Epistle. The reading given by L appears to be original, and then simplified by P and V to remove the apparent repetition.

With only three witnesses, any accident involves one manuscript's reading diverging from the other two; the results have to be handled with care. A rough assessment of the quality of the manuscripts reveals that, among accidents qualified as "simple", i.e., three witnesses and two readings, L has 23 unique readings, P has 9, and V presents 32. For what M classifies as omissions or additions, that is, cases where one witness either has or does not have a word found in the other two²⁰, excluding the cases of *c.* (see below), which Mariani documents

²⁰ In the table, omissions and additions are relative to the text of M and therefore have the same value for establishing such a text.

throughout, L has 13 such perturbations unique to it, P has 2, and V counts 30.

A handful of simple accidents suggest a genealogical relation, providing a reading that is not easily duplicated by scribal error nor corrected, many with one reading clearly preferable, and the other likely due to error:

Table 1: Genealogically significant variants

page.line	text	text witnesses	variant	var. witness
437.16	principaliores	L	principales	PV
440.02	scribitur	L	habetur	PV
446.01	nonum	L	nomen	PV
477.19	simplici	PV	speciali	L
478.13	accipit	PV	recipit	L
479.17	asserit	LP	astruit	V
480.09	preceptum	LP	mandatum	V
484.17	pronome	LP	nomine	V
486.01	complectitur	LP	plectitur	V
486.02	comodamus	LP	prestamus	V
491.14	plenius	L	planius	PV
492.01	explicaturi	LP	testificaturi	V

P has so few unique accidents that none of them can be securely judged genealogically significant. The only cases where two manuscripts share obvious errors is PV against L; LP do not share any mistakes of significance. Given that PV also share a 20-word homeoteleutic omission, the evidence weighs towards PV being more closely related to each other than to L.

Other findings explain Mariani's editorial method. The edition is quite faithful, with only twelve, mostly minor, mistakes in the text (only one of which is a trivial typographical error) and two superfluous interventions. In choosing between the manuscripts L and V, M generally follows L. Francesco frequently cites the Vulgate, and in all the cases where his witnesses disagree, M follows the reading available in printed editions of those works, sometimes silently correcting to match the Vulgate text (e.g., 443.08), and maximizing the amount of text cited, even where it appears questionable (e.g., 445.17, where the passage ends with *etc.*, but M follows V in continuing the citation afterwards), or goes directly against the author's sense (487.18). This habit extends to other quoted sources, sometimes reproducing the source quote without noting the

variants (e.g., 446.01 gets *novum* from the edition of Jerome, and does not even list the variants of his manuscripts (*nonum* for L and *nomen* for V)).

M tends towards an inclusive editing style. Sometimes, this causes trouble, as on 483.07, where M adds *tuum* after *Qui petit a te, da ei* (Mt. 5,42) mistaking an annotation for a marginal correction in L (f. 59rb). In fact, the text continues, «dicendum quod ‘tuum’ est equivocum et commune ad ‘tuum’ quo ad dominium et ‘tuum’ quo ad usum.» The marginal notation has *tuum* and lines drawing going to two points, one above, one below the line (as with a *divisio*). Clearly this is not an addition, but a marginal annotation pointing to the two senses of *tuum* being discussed.

M’s apparatus follows this pattern. I found only seven cases of shortcomings with the critical apparatus, and quite a few of these were due to M’s idiosyncratic habit of only providing the *sigla* for cases where reference to L was needed. Generally, M takes care to note the smallest perturbations of the text. Most notably, in the manuscripts, quite often a *c* appears as part of a biblical citation, after the number of a chapter (e.g., *Actuum XI c.*). In expanding this abbreviation, Mariani’s edition appears to make a distinction: in the rare cases that the *c* has a superscript *o* above it, he expands it as *capitulo*; usually, it does not, and so he expands it as *capite*²¹. To avoid confusion and a philological debate on whether Francesco intended to call biblical chapters *capita*, we cite the cases below as *c*.

Conclusion

The discovery of the fragment in Paris, BnF NAL 2317 confirms Wittneben and Mariani’s hypothesis for the importance of P as a witness to Francesco d’Appignano’s *Improbatio*. It is an excellent witness to the text, and researchers working on the *Improbatio* should take it into account, alongside Mariani’s edition. In this sense, the discovery testifies to the changing role of editions in scholarship; while M was produced as

²¹ This can be seen on 447.06-07, based on L, f. 54r, where L has *Marci III c. et Luce VI* *c.*, and M expands *capite...capitulo*.

the authoritative version of the *Improbatio* — and it has fulfilled this role admirably for a generation — the growth of digital libraries allows us to use it as a means to accede to the witnesses themselves, to return to the sources where specific textual or doctrinal issues leave the reader with questions. At same time, the digitization of manuscript sources brings hope for the future. The original codex of P did not survive the eighteenth century, and likely was broken well before then. Yet fragments of it continue to be found, and, as we delve into the closets, drawers, and volumes of the libraries and archives of the world, we can hope to find more such fragments, not just the four missing bifolia from P, but perhaps even parts of texts unknown to modern scholarship.

Appendix

The reading in bold is the one Mariani selects for the edition. Novel readings in M are indicated in the Notes column.

Types:

simple: L, P, or V has a different reading than the other two

complex: L, P and V have different readings

editorial: M diverges from LPV

om.: Witnesses lack reading found in M

add.: Witnesses have reading found in M

inv.: Witnesses differ on word order

Additional abbreviations: *sed inv.*: Word order inverted with signs

a.c./p.c.: *ante correctionem/post correctionem*

Vulgate = the accident occurs in a citation of the Vulgate, and M follows the Vulgate reading.
